- Built Tracker Boss, a fully functional multitenant bug tracking software that allows managers to track projects and their associated trouble tickets throughout a products lifecycle. This was built using ASP.NET Core, MVC, and PostgreSQL.
- Built Tech Talks, a blog platform using ASP.NET Core, MVC, and PostgreSQL. I implemented role based security using the Microsoft Entity Framework, a search feature, and email service to notify registered users when a new blog had been posted.
- Built Address Almanac, a full featured contact/customer management solution using ASP.NET Core, MVC, and PostgreSQL. This app allows individual users to store contacts, search for individual contacts, or filter a list of contacts based on a given category. The user then has the option to email an individual or a category/group of contacts.
- Created a static portfolio site to show my skills with HTML, CSS/Bootstrap, and JavaScript. >> <https://khalawright.dev>
